PROFESSIONAL SUMMARY

Results-driven final-year B.Tech graduate specializing in Data Analytics, SQL, Python, and Power BI. Proven track record of executing end-to-end data pipelines—from raw data extraction, cleaning, and relational modeling to RFM segmentation and interactive dashboard reporting. Experienced in transforming complex business datasets into actionable retention, churn risk, and revenue insights.

TECHNICAL SKILLS

Languages & Querying: SQL, PostgreSQL, Python (Pandas, NumPy, Matplotlib)
Business Intelligence: Microsoft Power BI, DAX, Power Query, Data Modeling, Star Schema
Data Analytics: Data Cleaning, Exploratory Data Analysis (EDA), RFM Customer Segmentation, Statistical Analysis
Spreadsheets & Tools: Microsoft Excel (PivotTables, XLOOKUP, Advanced Formulas), OpenPyXL, Git/GitHub

FEATURED ANALYTICS PROJECTS

Customer 360 — E-commerce Growth & Retention Intelligence GitHub: [customer-360-intelligence](#)

- Engineered an end-to-end e-commerce data pipeline using Python (Pandas/NumPy) for data validation, cleaning, and outlier treatment across large-scale order transaction records.
- Implemented RFM customer segmentation modeling in Python to categorize customer base into Champions, Loyal, At Risk, and Lost segments.
- Executed advanced PostgreSQL query workflows (CTEs, Window Functions, GroupBy) to evaluate sales concentration (Pareto principle), repeat purchase rates, and product profit margins.
- Designed a 7-page interactive Power BI dashboard featuring dynamic drill-throughs, custom tooltips, and What-If scenarios; uncovered that At-Risk customers accounted for 34% of total revenue opportunity.

RavenStack — Subscription Health & Revenue Retention Analytics GitHub: [ravenstack-analytics](#)

- Analyzed account-level subscription retention and churn behavior across 500+ B2B SaaS accounts using SQL queries and Power BI data modeling.
- Formulated key DAX measures for Monthly Recurrent Revenue (MRR), account churn rates, and a custom rule-based customer risk scoring model.
- Isolated churn concentration patterns within specific segments (DevTools at 30.97% and Germany at 32%), disproving product or support performance as primary churn drivers.
- Identified over-indexing of monthly-billed accounts in the at-risk cohort and proposed targeted incentive strategies to migrate accounts to annual billing.

InsightFlow Analytics — End-to-End Retail Data Pipeline GitHub: [insightflow-analytics](#)

- Architected a full retail analytics data pipeline processing 15,000+ orders across 15 retail store locations and 2,000 unique customers.
- Designed a normalized PostgreSQL schema with primary/foreign key constraints and indexing; built a resilient Python database access layer using context managers.
- Automated multi-sheet Excel reporting utilizing OpenPyXL and Matplotlib, ensuring pipeline reliability by authoring 19 unit test cases using pytest.

BookVerse — SQL Analytics & Business Insights GitHub: [bookverse-sql](#)

- Developed 24 analytical SQL queries utilizing complex JOINS, subqueries, CTEs, and window functions to evaluate customer spending patterns and inventory turnover.

CERTIFICATIONS & PRACTICAL EXPERIENCE

Tata — GenAI Powered Data Analytics Job Simulation EDA, Risk Profiling, AI-Driven Reporting	<i>Jul 2026</i>
Lloyds Banking Group — Data Science Job Simulation Exploratory Data Analysis, ML Modeling	<i>Oct 2025</i>
Quantium — Data Analytics Job Simulation Customer Analytics, Experimentation & Uplift Testing	<i>Sep 2025</i>
Deloitte Australia — Data Analytics Job Simulation Forensic Technology & Data Analysis	<i>Sep 2025</i>

EDUCATION

JSS Academy of Technical Education <i>Bachelor of Technology (B.Tech) in Electronics and Communication Engineering</i>	Noida, Uttar Pradesh <i>Graduated: June 2026</i>
